## Instructions for Microchip Implantation

---

Please provide the following instructions to your veterinarian:

Scan the microchip to be implanted prior to implantation and make sure the number on the stickers corresponds to the microchip in the package. This will also make sure the microchip is in good working order before implantation in the horse.

The microchip is to be implanted in the nuchal ligament on the left side of the neck perpendicular to the point of the shoulder.

After implantation the chip should be scanned and verified. Please make sure to record the number and place the sticker on the Microchip form.

*If there are any questions please contact the FHS office.*
