

Friesian Horse Society, Inc. (FHS) Keured Stallion X-Ray Evaluation

For Office Use Only
Date received: _____ Date Processed: _____

This "Keured Stallion X-Ray Evaluation Report" must be prepared by a veterinarian, signed and returned to FHS prior to entry into the Stallion Performance Test or completion of Approval through Performance. The X-ray films must be labeled with the name and registration number before the development of the films to verify the identification. The original films (disc only) are kept at the FHS office. Serious abnormalities result in no entry into the SPT, Stallion Book or cancellation of approval. The decision is made by the FHS with the agreement of the equine veterinarian.

Stallion's registered name: _____

Registration number: _____

Microchip number: _____

Date of Birth: _____

Registered owner: _____

Required X-ray Films: Technically perfect X-ray films must be produced including,

1. Lateral views of all four feet including fetlock joints (from hoof to the middle of the cannon bone),
2. Frontal views of the two forelegs to show the navicular bone
3. Both hocks in at least two different projections (70 degrees and 115 degrees). (By definition, 0 degrees is a frontal view and 90 degrees is lateral-medial.)

X-rays must be analyzed and the findings placed into one of 4 different X-ray categories according to the European X-ray Commission:

Group 1: X-rays without abnormalities or with findings classified as insignificant

Group 2: X-ray findings, which deviate mildly from the norm, for which clinical relevance unclear, uncertain or unknown.

Group 3: X-ray findings which deviate significantly from the norm but the potential negative impact on performance is uncertain.

Group 4: X-ray findings, which will with utmost probability lead to negative impact on performance.

Additional grading of navicular bone disease: Degree one: no abnormality

Degree two: widened canals

Degree three: "clubby" widened canals

Degree four: "Swiss-cheese-like" appearance

STALLION KEURING X-RAY EVALUATION (Continued)

Stallion's registered name: _____

Lateral Views of Feet:

- Classification Group _____
- Right Front findings (describe): _____

- Classification Group _____
- Left Front Findings (describe): _____

- Classification Group _____
- Right Hind findings (describe): _____

- Classification Group _____
- Left Hind findings (describe): _____

Frontal Views of Forelegs to Show Navicular Bone:

- Classification: Group _____ Degree _____
- Right findings (describe) _____

- Classification: Group _____ Degree _____
- Left:
- Findings (describe) _____

Hocks:

• **Right**

- 70° Oblique View:
- Classification Group _____
- Findings (describe): _____

- 115° Oblique View:
- Classification Group _____
- Findings (describe): _____

• **Left**

- 70° Oblique View:
- Classification Group _____
- Findings (describe): _____

- 115° Oblique View:
- Classification Group _____
- Findings (describe): _____

Stallion's registered name: _____

- To the best of my knowledge, with respect to the above x-rays, I do / do not (*circle one*) hereby certify that no defects or anomalies exist that damage the breeding value.

If not, please explain:

Examination was performed and this report provided by the following licensed veterinarian:

Name: _____

Company: _____

Address: _____

City/State/Zip: _____

Signature: _____

X-Rays on file at (check if already done): _____ FHS office

*This form *may be* may be faxed or mailed to the FHS office.

*Please mail the x-rays on disc to:
